

# **Advanced Bioinformatics**

**Biostatistics & Medical Informatics 776**

**Computer Sciences 776**

**Spring 2018**

**Anthony Gitter**

**[gitter@biostat.wisc.edu](mailto:gitter@biostat.wisc.edu)**

**[www.biostat.wisc.edu/bmi776/](http://www.biostat.wisc.edu/bmi776/)**

# Agenda Today

- Introductions
- Course information
- Overview of topics

# Course Web Site

- [www.biostat.wisc.edu/bmi776/](http://www.biostat.wisc.edu/bmi776/)
- Syllabus and policies
- Readings
- Tentative schedule
- Lecture slides (draft posted before lecture)
- Announcements
- Homework
- Project information
- Link to Piazza discussion board

# Your Instructor: Anthony Gitter

- Email: [gitter@biostat.wisc.edu](mailto:gitter@biostat.wisc.edu)
- Office: room 3268, Discovery Building
- Assistant professor, Biostatistics & Medical Informatics
- Affiliate faculty, Computer Sciences
- Investigator, Morgridge Institute for Research
- Research interests: biological networks, time series analysis, applied machine learning

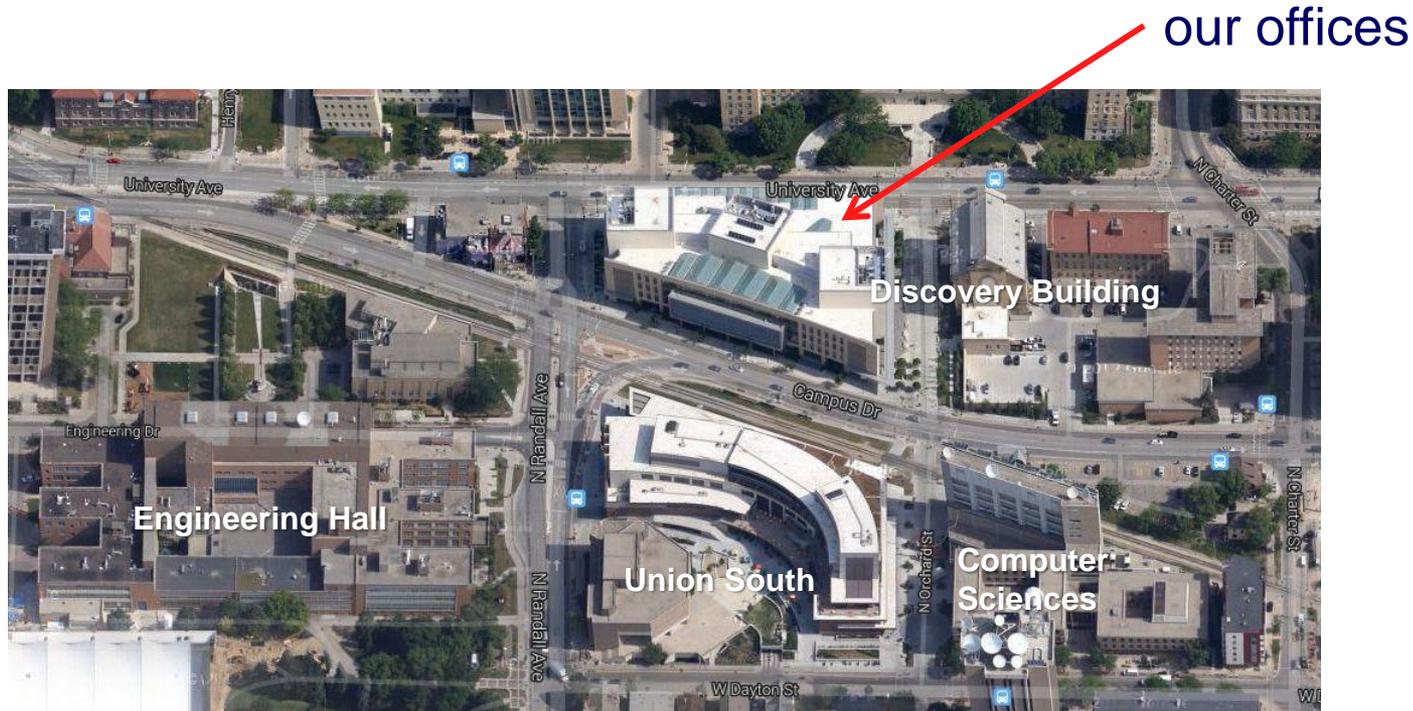

# Your TA: Fangzhou Mu

- Email: [fm2@wisc.edu](mailto:fm2@wisc.edu)
- Office: WID 3365C
- Graduate student, Pharmacy

# Office Hours

- Instructor: Tuesday and Thursday, 2:30-3:30 PM
  - Immediately after class
- TA: Monday, 1:00-2:00 PM

# Finding Our Offices: Discovery Building

- 3<sup>rd</sup> floor has restricted access
- See Piazza before 1/28 if you need building access
- Stop at visitor desk to call my office if card does not work

# Finding Our Offices: Discovery Building

# You

- So that we can all get to know each other better, please tell us your
  - name
  - major or graduate program
  - research interests and/or topics you're especially interested in learning about
  - favorite programming language

# Course Requirements

- 4 or 5 homework assignments: ~40%
  - Written exercises
  - Programming (Python)
  - Computational experiments (e.g. measure the effect of varying parameter  $x$  in algorithm  $y$ )
  - Five late days permitted
- Project: ~25%
- Midterm: ~15%
- Final exam: ~15%
- Class participation: ~5%

# Exams

- Midterm: March 13, in class
- Final: Wednesday May 9, 12:25-2:25 PM
- Let me know *immediately* if you have a conflict with either of these exam times

# Computing Resources for the Class

- Linux servers in Dept. of Biostatistics & Medical Informatics
  - No “lab”, must log in remotely (use WiscVPN)
  - Will create accounts for everyone on course roster
  - Two machines
    - mi1.biostat.wisc.edu
    - mi2.biostat.wisc.edu
  - HW0 tests your access to these machines
  - Homework must be able to run on these machines
- CS department usually offers Unix orientation sessions at beginning of semester

# Programming Assignments

- All programming assignments require Python
  - Project can be in any language
- Have a Python 3 environment on biostat servers
  - Permitted packages on course website
  - Can request others
- HW0 will be Python introduction
- Use Piazza for Python discussion
  - If you know Python, please help answer questions

# Project

- Design and implement a new computational method for a task in molecular biology
- Improve an existing method
- Perform an evaluation of several existing methods
- Run on real biological data
- Suggestions will be provided
- Not directly related to your existing research
- Can email me now to discuss ideas

# Participation

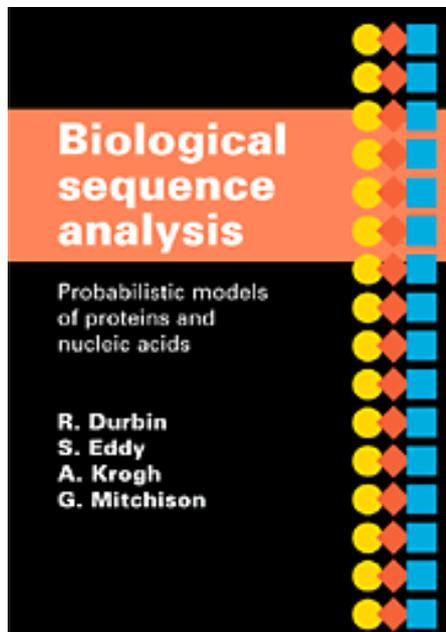

- Do the assigned readings before class
- Show up to class
- No one will have the perfect background
  - Ask questions about computational or biological concepts
- Correct me when I am wrong
  - Seriously, it will happen
- Piazza discussion board
  - Questions and answers

# Piazza Discussion Board

- Instead of a mailing list
- <http://piazza.com/wisc/spring2018/bmics776/home>
- Post your questions to Piazza instead of emailing the instructor or TA
  - Unless it is a private issue or project-related
- Answer your classmates' questions
- Announcements will also be posted to Piazza
- Supplementary material for lecture topics

# Course Readings

- Mostly articles from the primary literature
- Must be using a campus IP address to download some of the articles (can use WiscVPN from off campus)
- *Biological Sequence Analysis: Probabilistic Models of Proteins and Nucleic Acids*. R. Durbin, S. Eddy, A. Krogh, and G. Mitchison. Cambridge University Press, 1998.

# Prerequisites

- BMI/CS 576 or equivalent
- Knowledge of basic biology and methods from that course will be assumed
- May want to go over the material on the 576 website to refresh
- <http://www.biostat.wisc.edu/bmi576/>

# What you should get out of this course

- An understanding of some of the major problems in computational molecular biology
- Familiarity with the algorithms and statistical techniques for addressing these problems
- How to think about different data types
- At the end you should be able to
  - Read the bioinformatics literature
  - Apply the methods you have learned to other problems both within and outside of bioinformatics
  - Write a short bioinformatics research paper

# Major Topics to be Covered (the algorithms perspective)

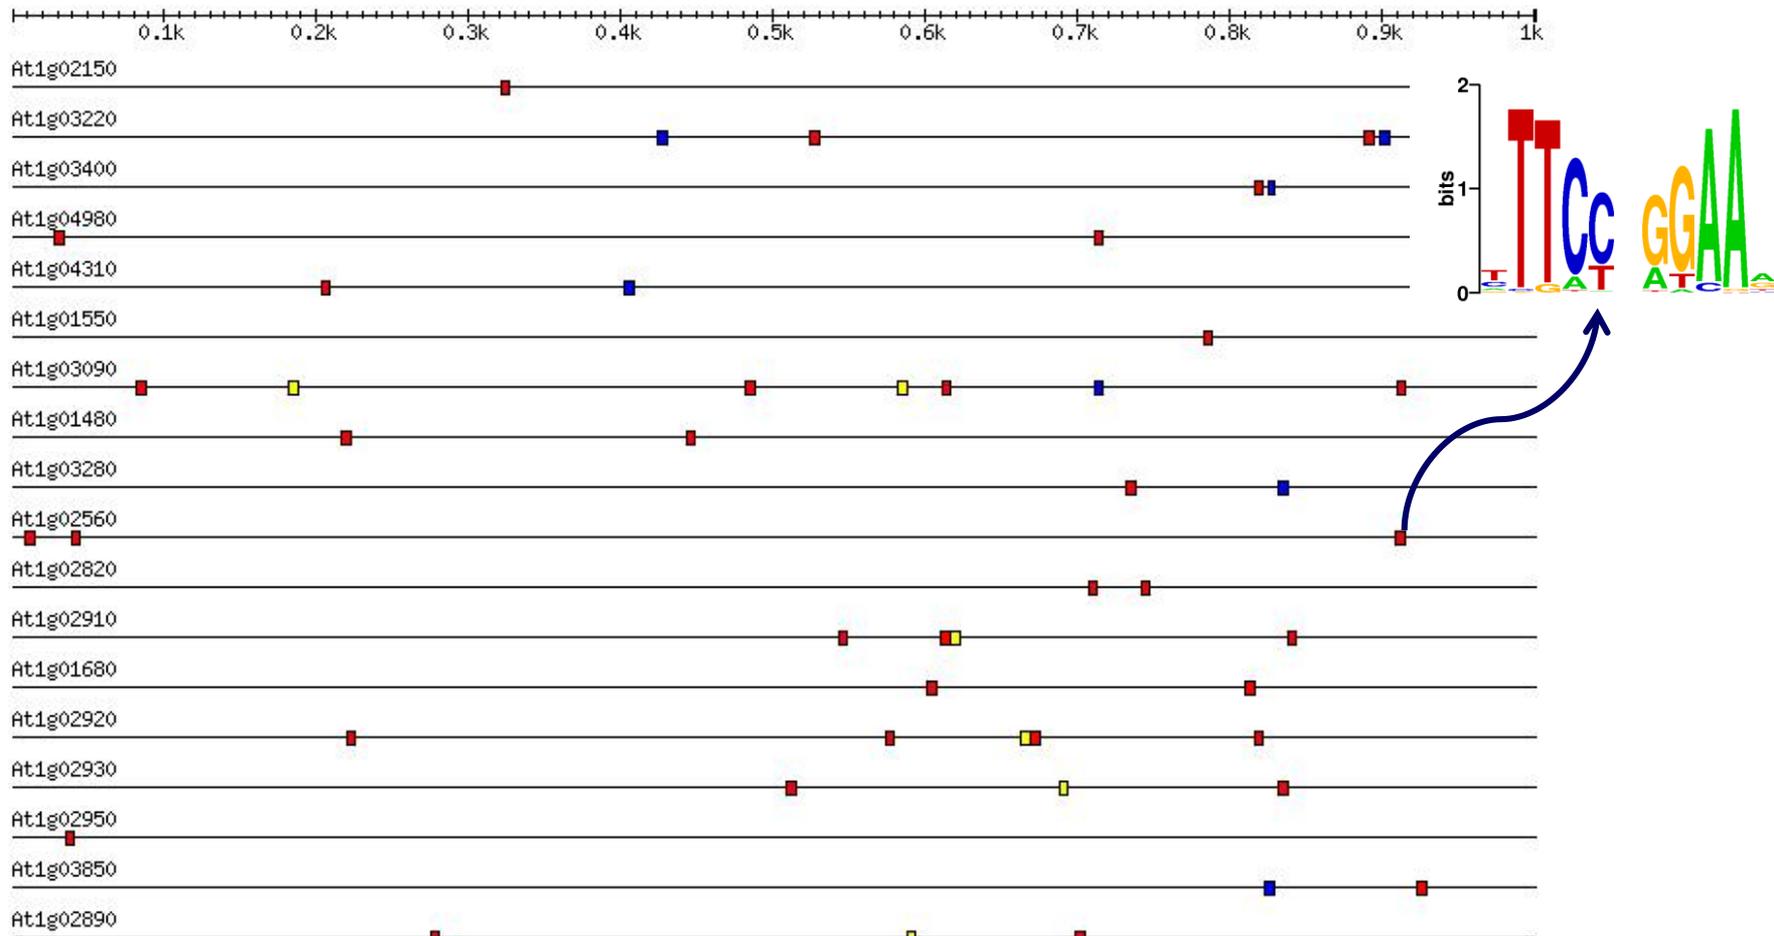

- Expectation Maximization
- Gibbs sampling
- Mutual information
- Multiple hypothesis testing correction
- Convolutional neural networks
- Linear programming
- Interpolated Markov models
- Duration modeling and semi-Markov models
- Tries and suffix trees
- Markov random fields
- Stochastic context free grammars

# Major Topics to be Covered (the task perspective)

- Modeling of motifs and *cis*-regulatory modules
- Identification of transcription factor binding sites
- Genotype analysis and association studies
- Regulatory information in epigenomic data
- Transcriptome quantification
- Mass spectrometry peptide and protein identification
- Pathways in cellular networks
- Gene finding
- Large-scale sequence alignment
- RNA sequence and structure modeling

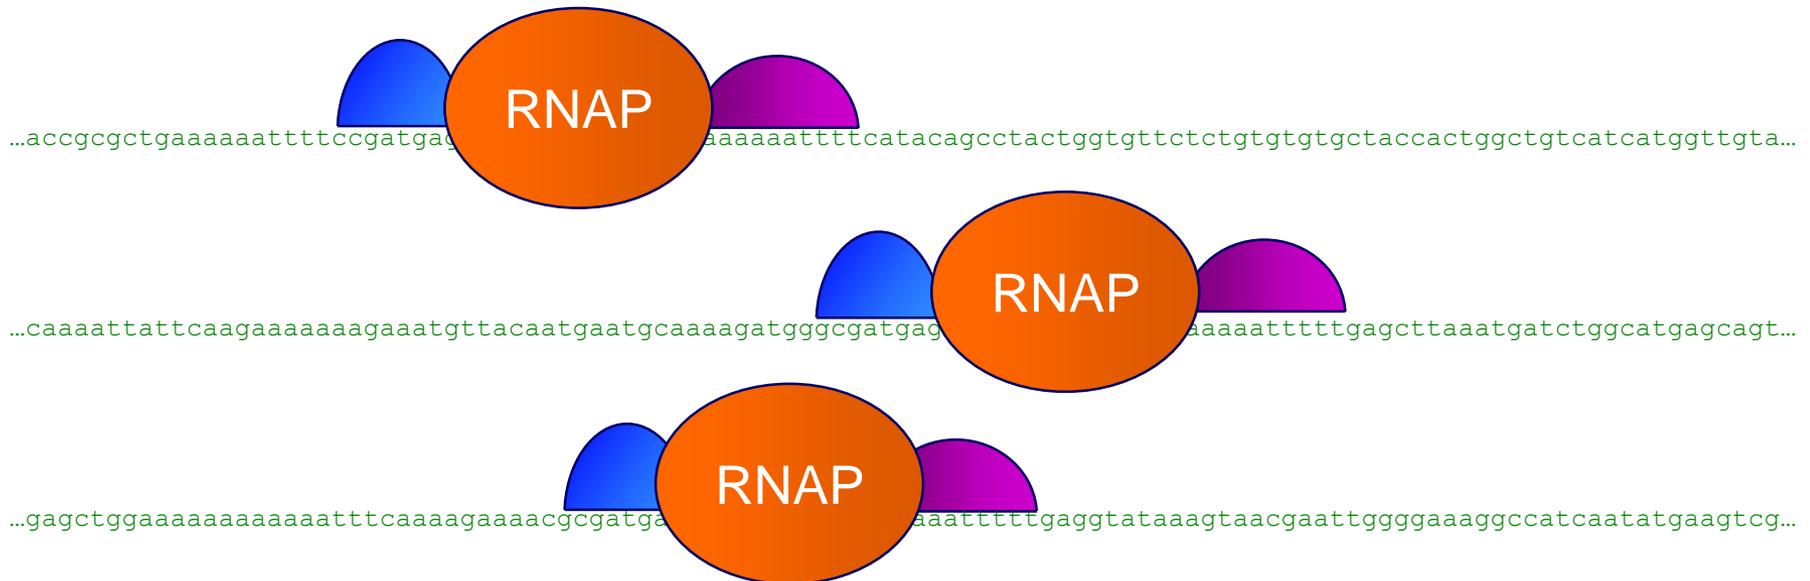

# Motif Modeling

What sequence motif do these promoter regions have in common?

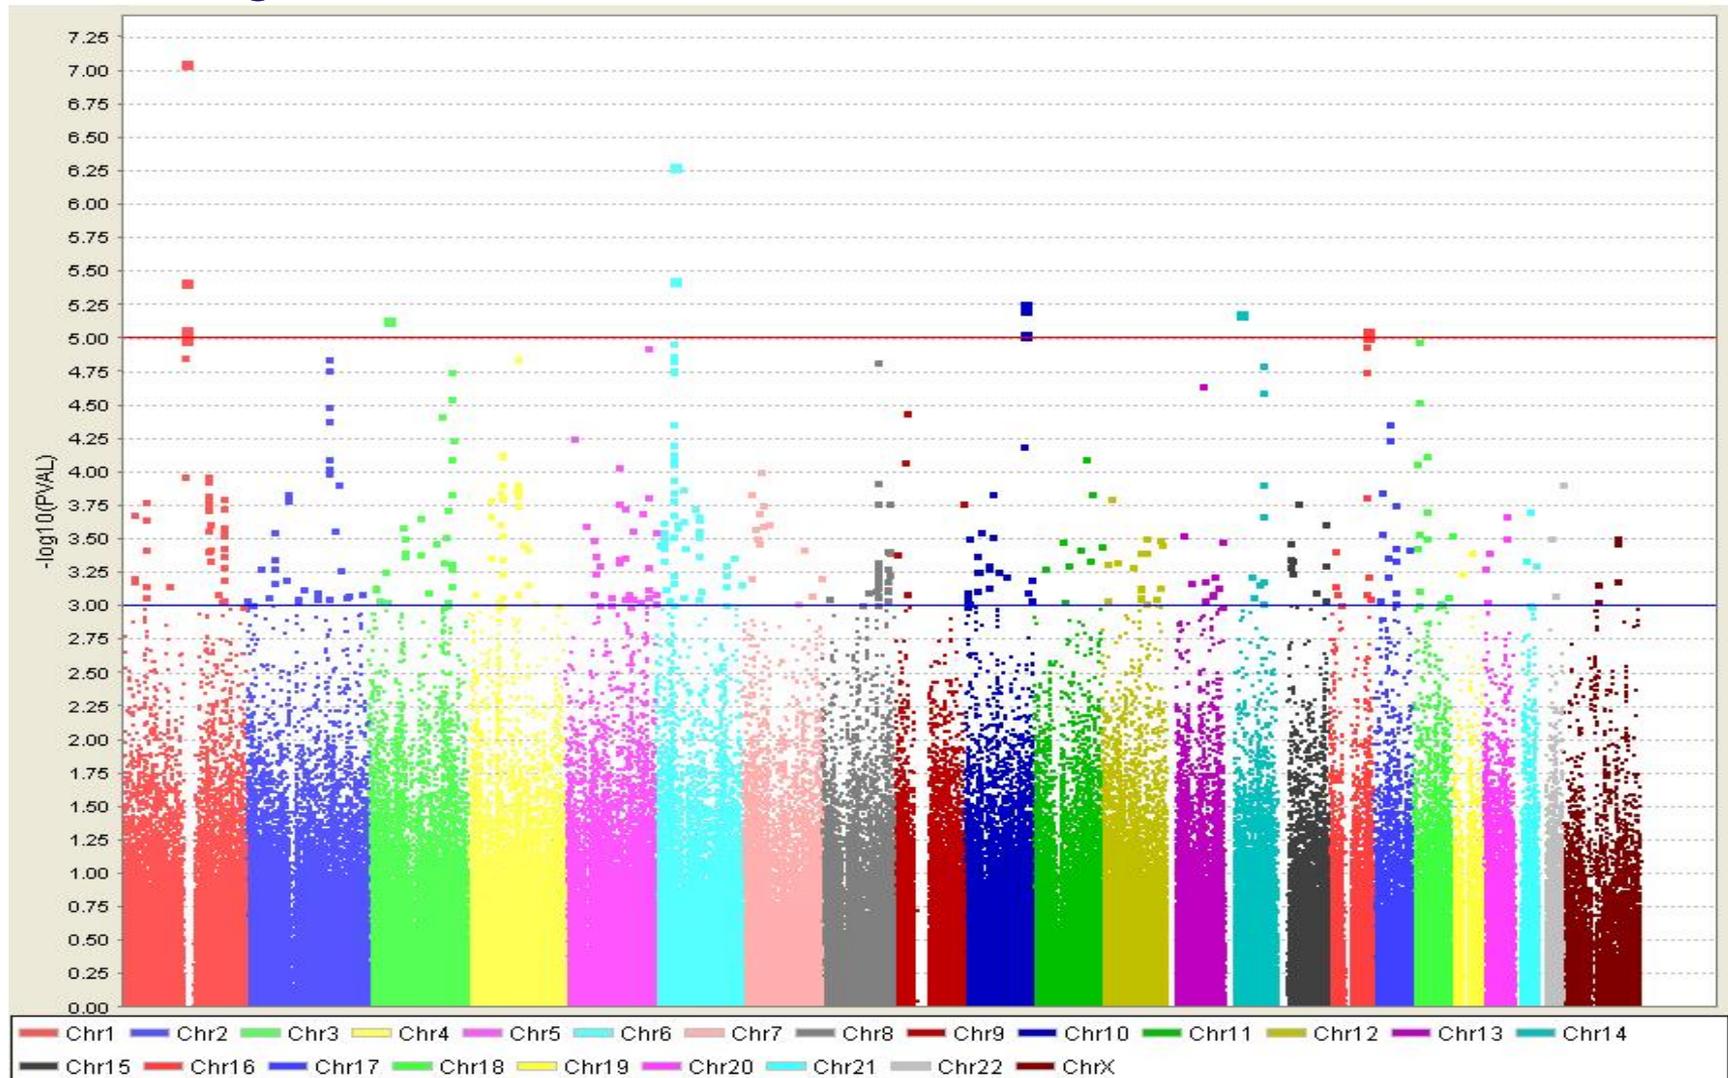

# *cis*-Regulatory Modules

What configuration of sequence motifs do these promoter regions have in common?

# Genome-wide Association Studies

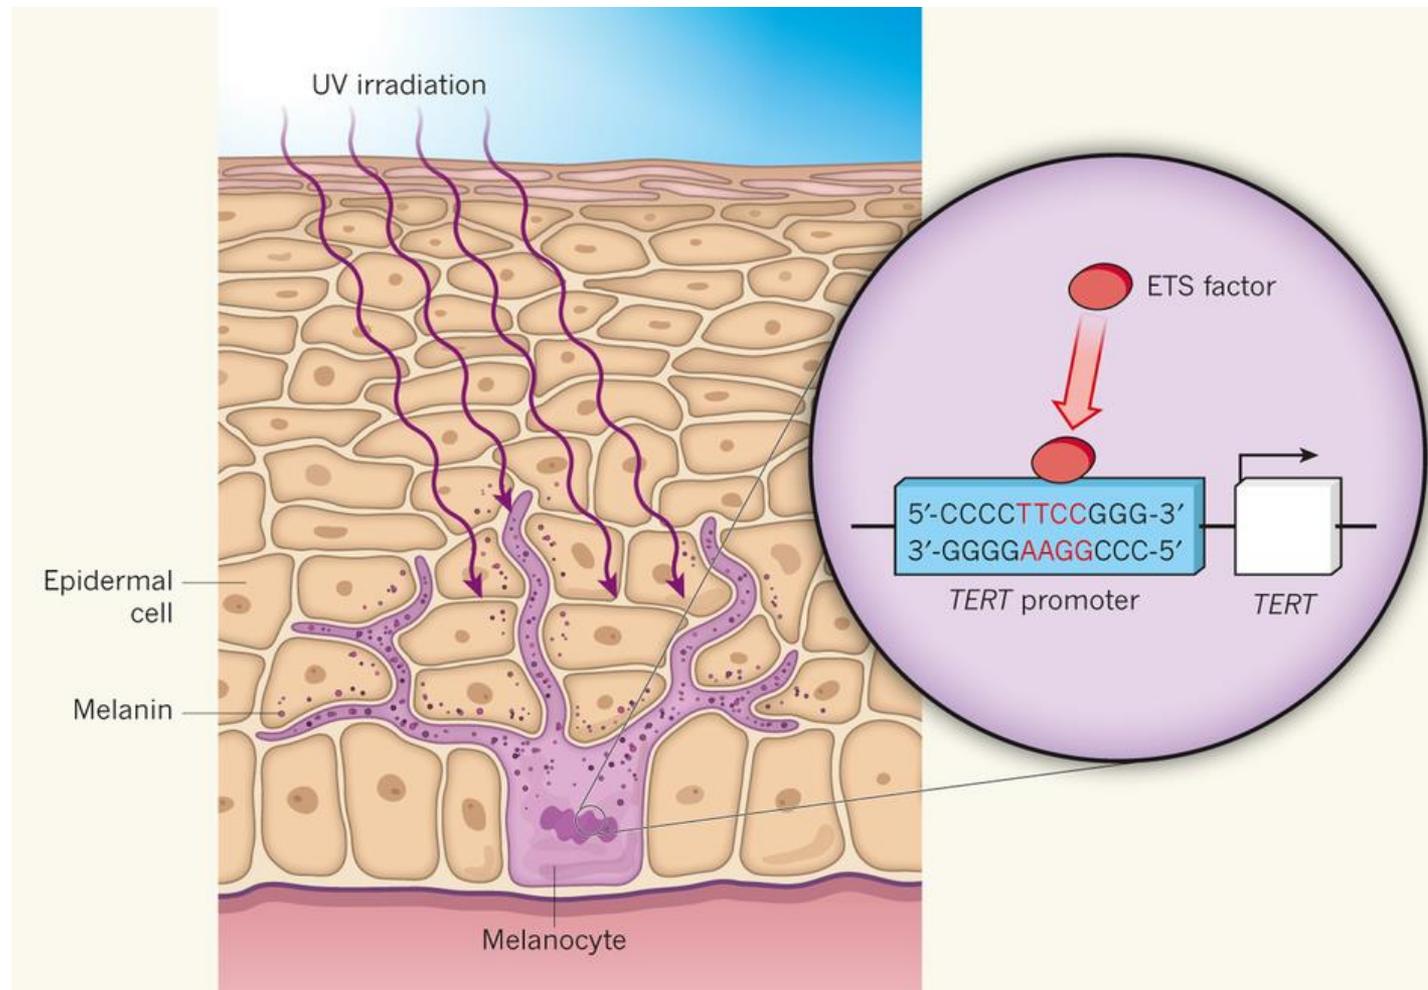

Which genes are involved in diabetes?

Type 2 diabetes association P values by chromosome (386,731 markers). The x-axis is the genomic position by chromosome 1-22 and X (by color), and the y-axis is the negative base 10 logarithm of the P value.

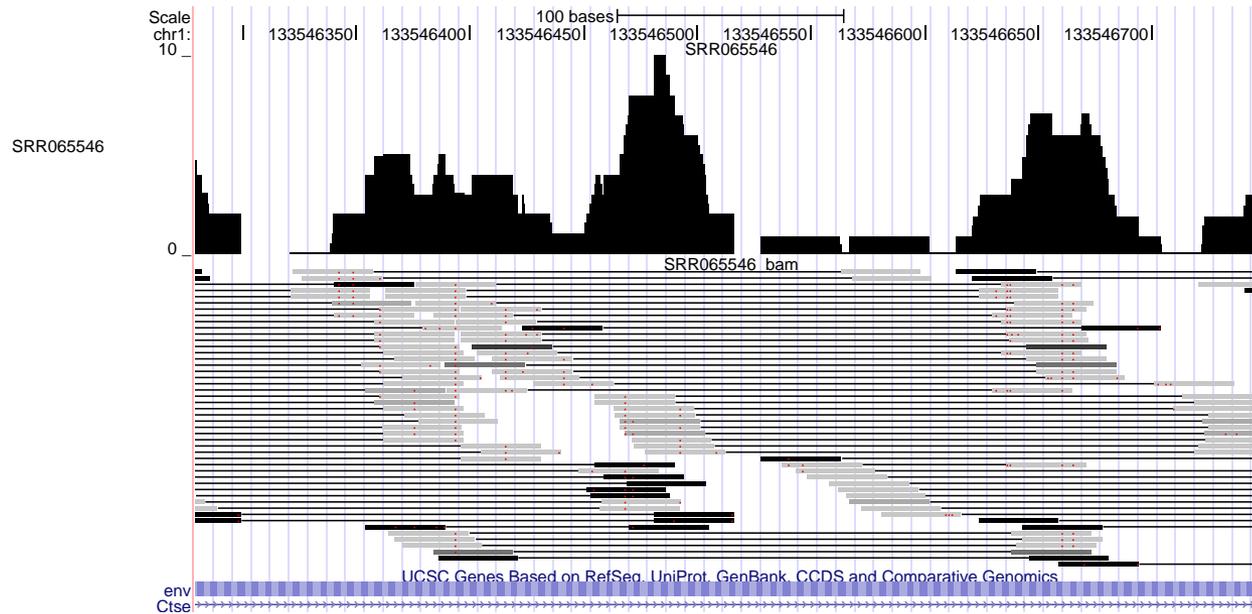

# Noncoding Genetic Variants

How do genetic variants outside protein coding regions impact phenotypes?

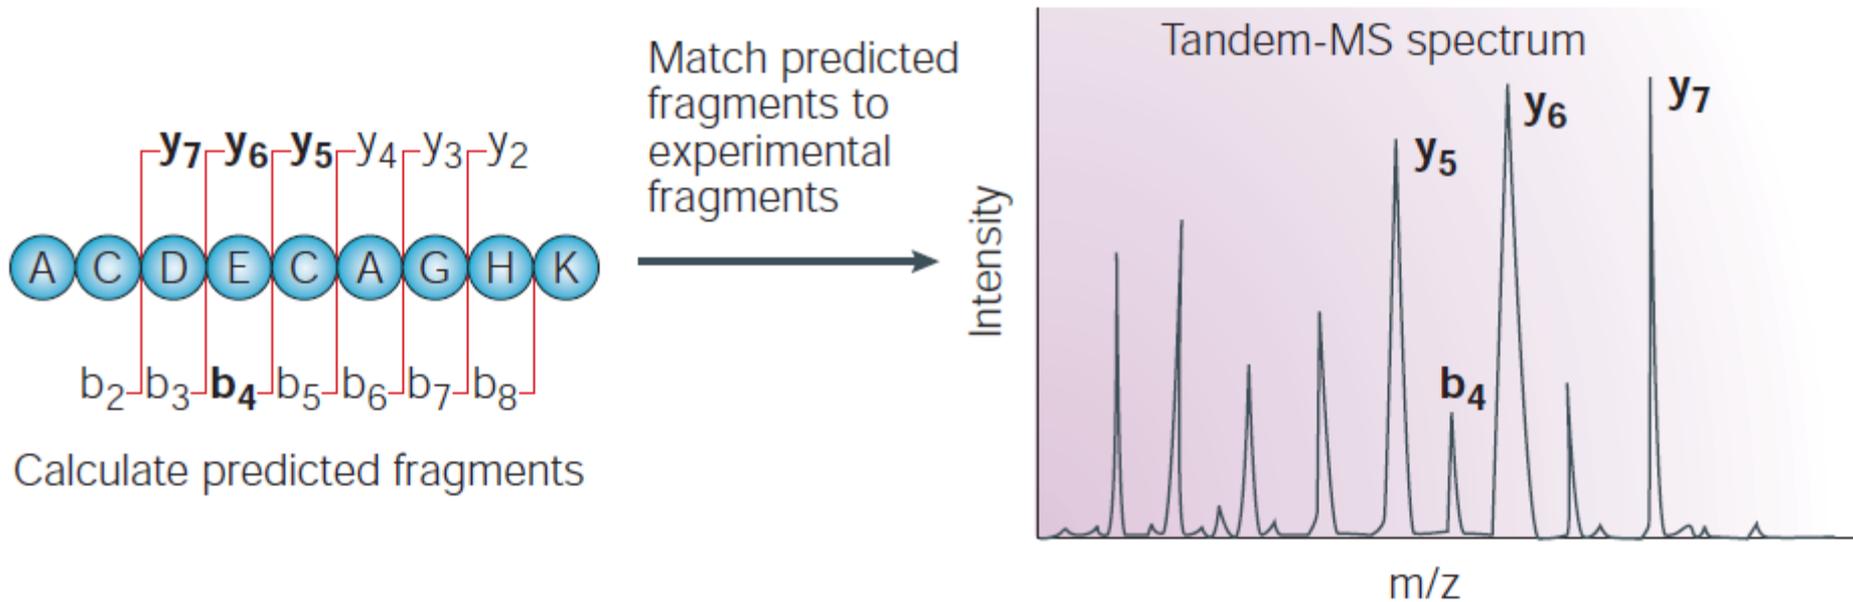

# Transcriptome Analysis with RNA-Seq

What genes are expressed and at what levels?

# Proteomic Analysis with Mass Spectrometry

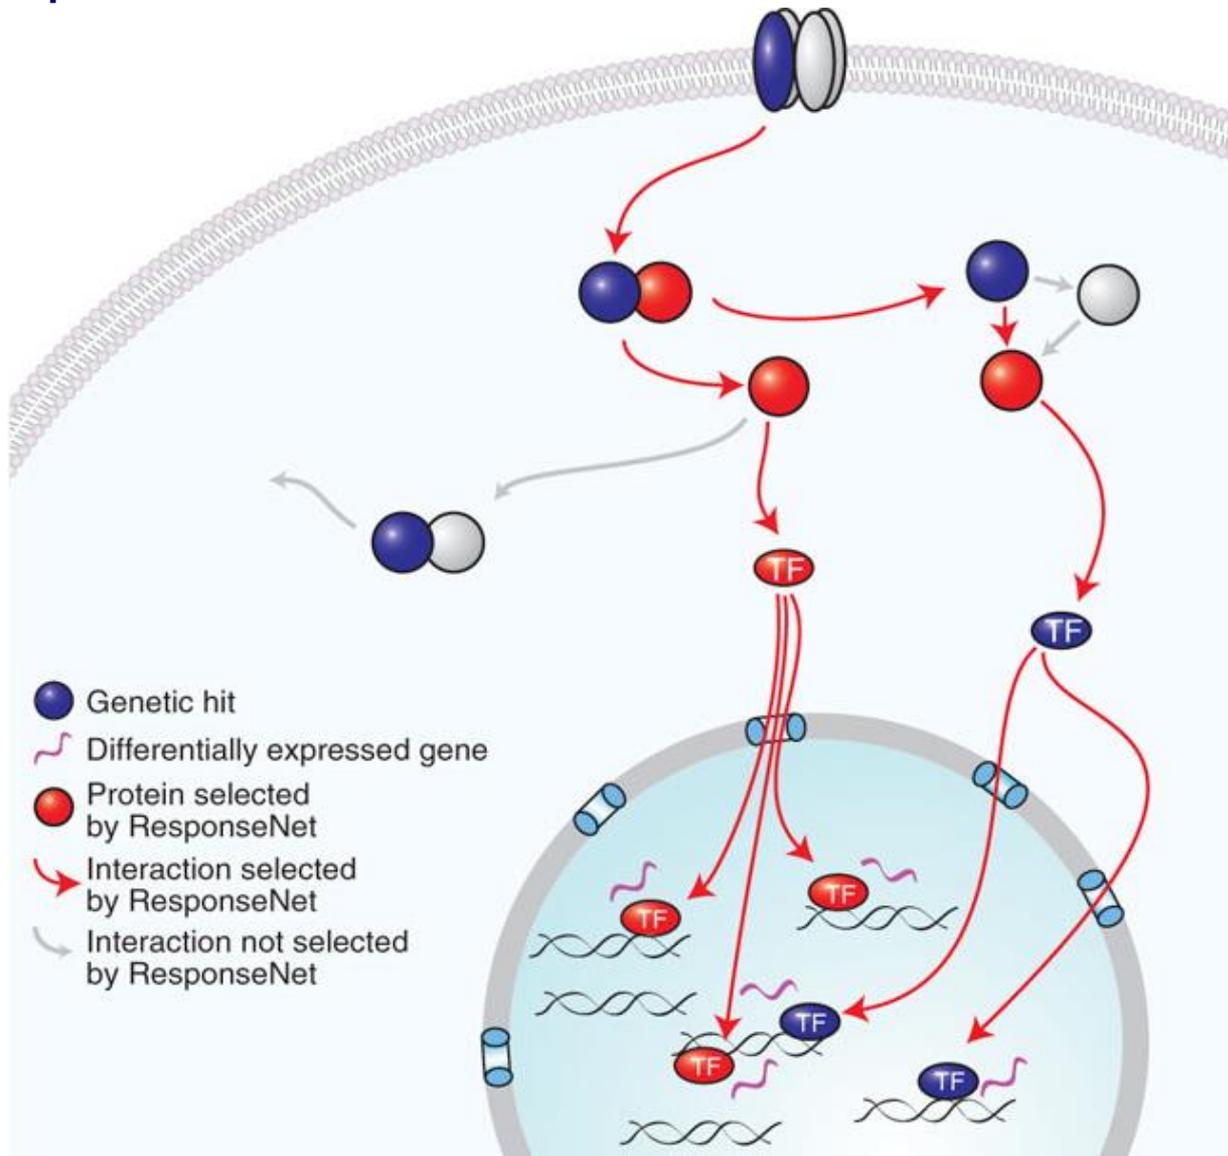

What proteins are expressed and at what levels?

Steen and Mann, *Nature Reviews Molecular Cell Biology*, 2004

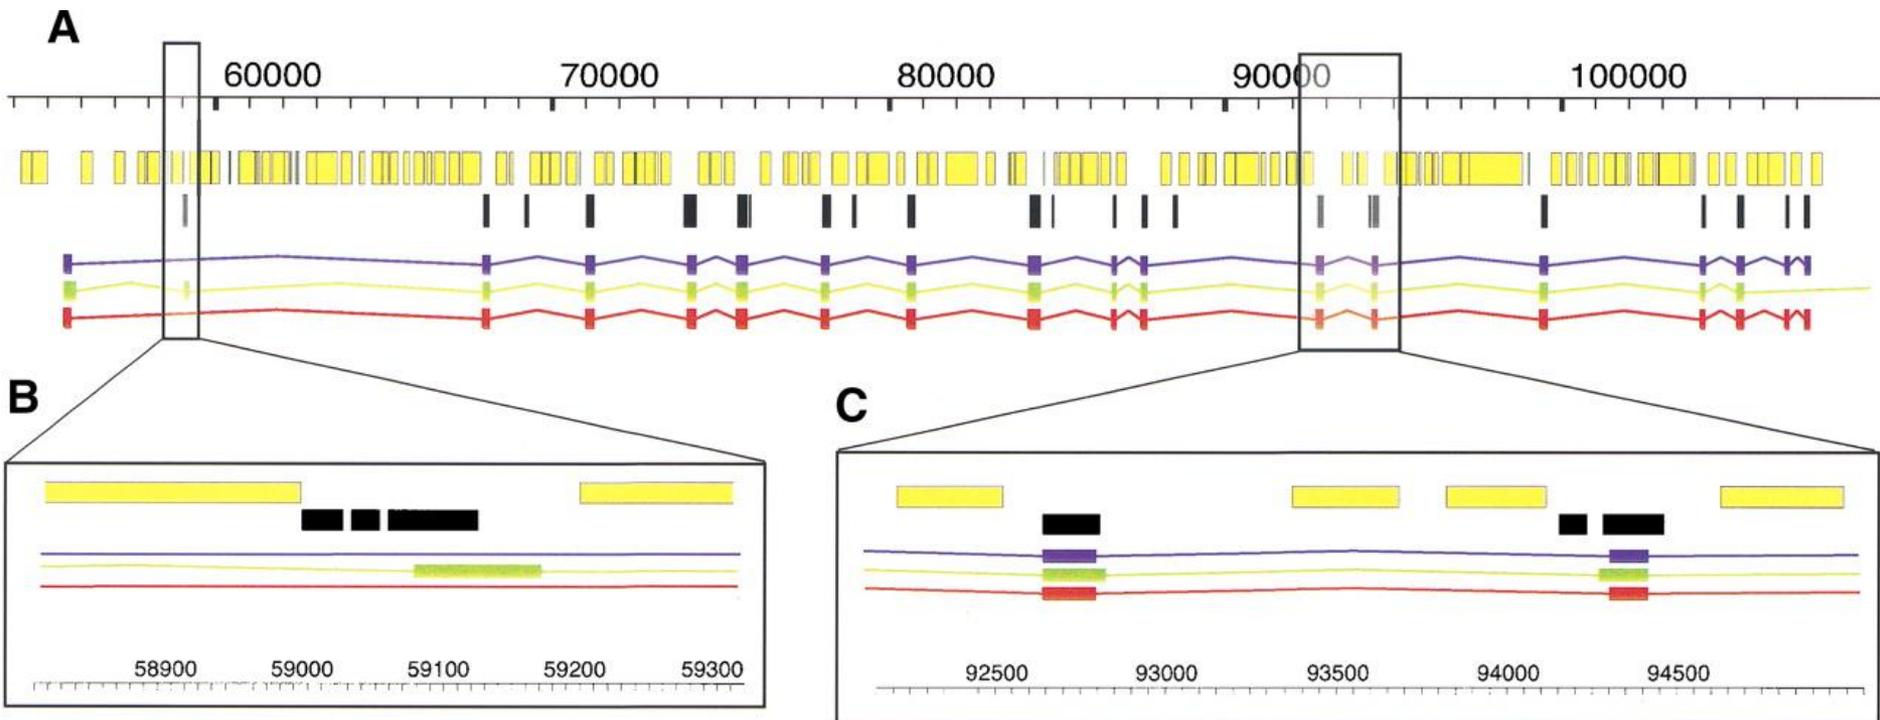

# Identifying Signaling Pathways

How do proteins coordinate to transmit information?

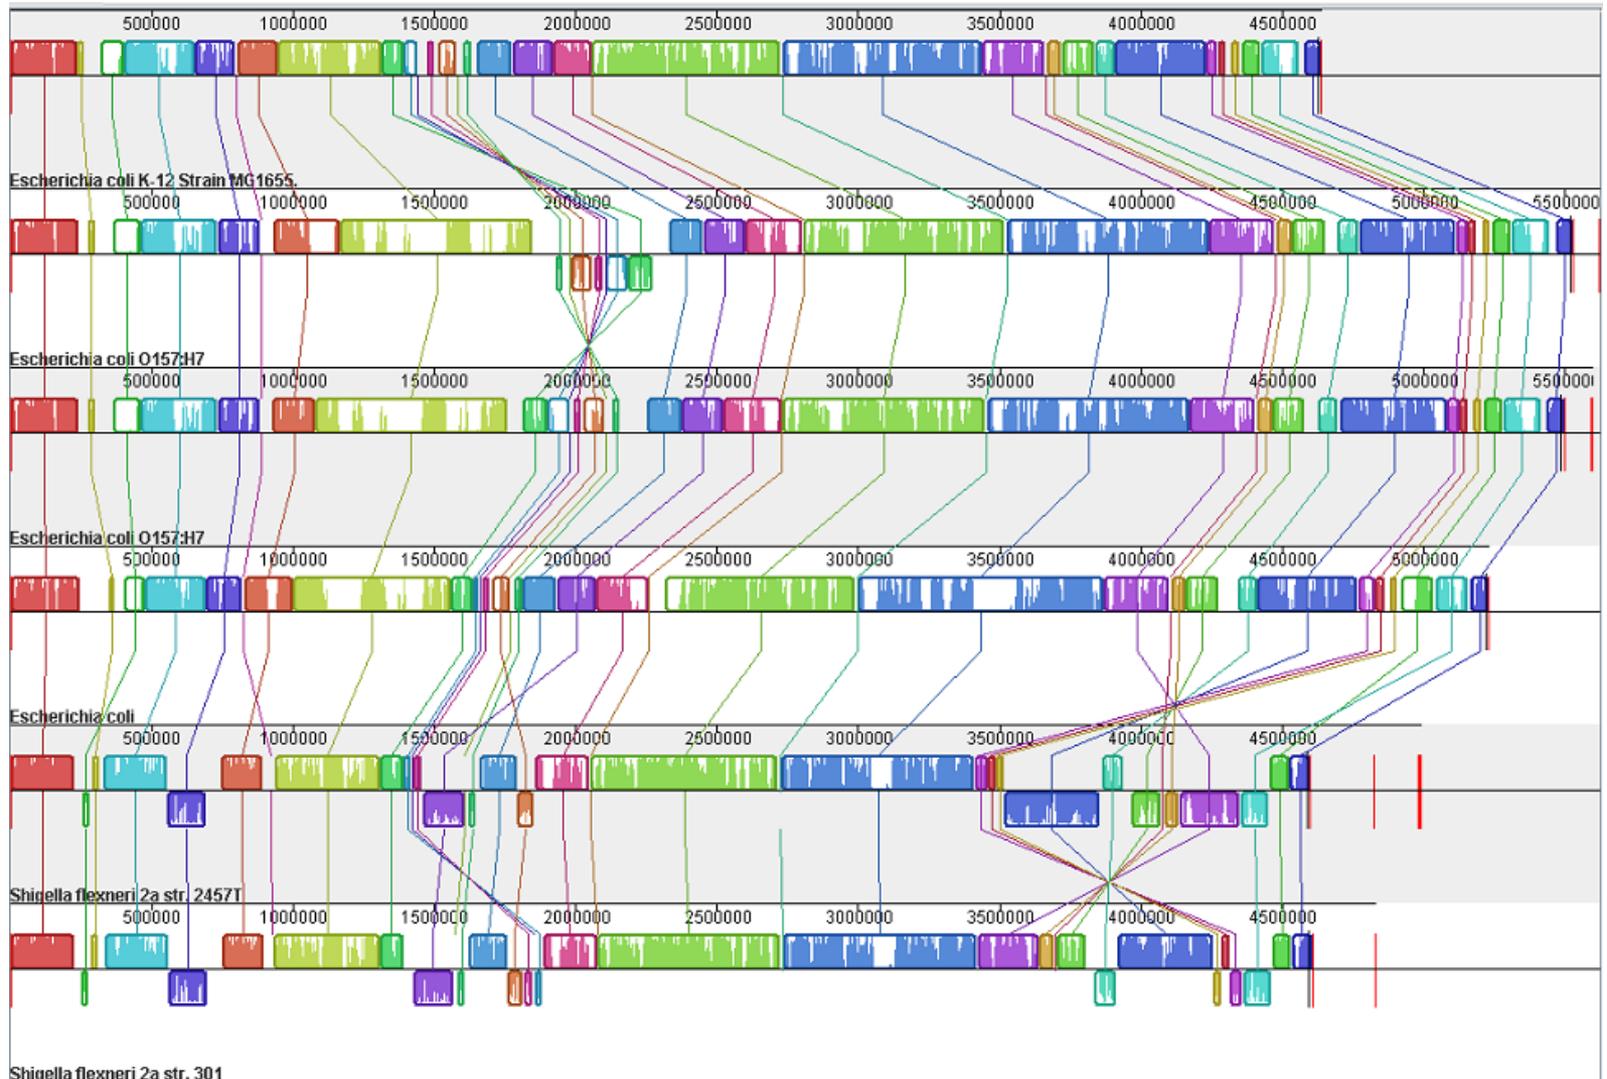

# Gene Finding

Where are the genes and functional elements in a genome?

# Large Scale Sequence Alignment

What is the best alignment of these 6 genomes?

# Other Topics

- Many topics we aren't covering
  - Protein structure prediction
  - Protein function annotation
  - Modeling long reads
  - Metagenomics
  - Metabolomics
  - Sequence compression
  - Graph genomes
  - Single-cell sequencing
  - Pseudo- and quasi-alignment
  - Text mining
  - Others?

# Reading Groups

- Computational Systems Biology Reading Group
  - <http://lists.discovery.wisc.edu/mailman/listinfo/compsysbiojc>
- AI Reading Group
  - <http://lists.cs.wisc.edu/mailman/listinfo/airg>
- ComBEE Python Study Group
  - <https://combee-uw-madison.github.io/studyGroup/>
- Many relevant seminars on campus
