Karl -- this is very interesting,
however you used an old version of
the data (n=143 rather than n=226).

I'm really sorry you did all that
work on the incomplete dataset.

Bruce

In what order do I run these scripts?

Where did we get this data file?

Why did I omit those samples?

How did I make that figure?

"Your script is now giving an error."

"The attached is similar to the code we used."

Reproducible

Reproducible

vs.

Replicable

Reproducible

vs.

Correct

Levels of quality

- ▶ Are the tables and figures reproducible from the code and data?
- ▶ Does the code actually do what you think it does?
- ▶ In addition to **what** was done, is it clear **why** it was done?
(e.g., how were parameter settings chosen?)
- ▶ Can the code be used for other data?
- ▶ Can you extend the code to do other things?

Steps toward reproducible research

kbroman.org/steps2rr

1. Everything with a script

If you do something once,
you'll do it 1000 times.

2. Organize your data & code

File organization and naming
are powerful weapons against chaos.

– Jenny Bryan

2. Organize your data & code

Your closest collaborator is you six months ago,
but you don't reply to emails.

(paraphrasing [Mark Holder](#))

2. Organize your data & code

```
RawData/           ReadMe.txt
DataSummary/      ToDo.txt
DerivedData/      Makefile

Python/           Notes/
R/                Refs/
Ruby/
```

3. Automate the process (GNU Make)

```
R/analysis.html: R/analysis.Rmd Data/cleandata.csv
  cd R;R -e "rmarkdown::render('analysis.Rmd')"
```

```
Data/cleandata.csv: R/prepData.R RawData/rawdata.csv
  cd R;R CMD BATCH prepData.R
```

```
RawData/rawdata.csv: Python/xls2csv.py RawData/rawdata.xls
  Python/xls2csv.py RawData/rawdata.xls > RawData/rawdata.csv
```

4. Turn scripts into reproducible reports

Gough project diagnostics

Karl Broman, 3 March 2014

Combine genotypes and phenotypes

I've combined the initial genotypes (using the re-clustered genotypes for plates 14-16) with the well-behaved portion of the re-run genotypes. I'm focusing on 36813 markers that are informative (though, as we'll see, there are still a lot of badly behaved and basically non-informative markers that need to be removed). I've combined data on replicate samples, to give one set of genotype calls for each sample.

There are 1497 genotyped mice and 1464 phenotyped mice. All of the mice in the phenotype data have genotypes, but there are 33 genotyped mice with no phenotypes, including 3 Gough mice and 30 F2 progeny.

4. Turn scripts into reproducible reports

Gough project diagnostics

Karl Broman, 3 March 2014

Comb

I've comb
the well-
informat
informat
give one

There are
data have
mice and

```
25 I've combined the initial genotypes (using the re-clustered genotypes
26 for plates 14-16) with the well-behaved portion of the re-run
27 genotypes. I'm focusing on `r totmar(g)` markers that are informative
28 (though, as we'll see, there are still a lot of badly behaved and
29 basically non-informative markers that need to be removed).
30 I've combined data on replicate samples, to give one set of genotype
31 calls for each sample.
32
33 There are `r nind(g)` genotyped mice and `r nrow(phe)` phenotyped
34 mice. All of the mice in the phenotype data have genotypes, but there
35 are `r sum(is.na(match(gid, pid)))` genotyped mice with no phenotypes,
36 including `r sum(g$pheno$gen[which(is.na(match(gid, pid)))]==0)`
37 Gough mice and `r sum(g$pheno$gen[which(is.na(match(gid, pid)))]==2)`
38 F2 progeny.
```

5. Turn repeated code into functions

```
# Python
def read_genotypes (filename):
    "Read matrix of genotype data"
```

```
# R
plot_genotypes <-
function(genotypes, ...)
{
}
```

6. Create a package/module

Don't repeat yourself

7. Use version control (git/GitHub)

7. Use version control (git/GitHub)

The screenshot shows a GitHub repository page for 'kbroman / Talk_MAGIC'. At the top, it indicates 'PUBLIC' and 'kbroman / Talk_MAGIC' with options to 'Unwatch', 'Star', and 'Fork'. The repository title is 'Talk for MAGIC workshop in Cambridge, UK, 12 June 2013'. It shows 97 commits, 1 branch, 0 releases, and 1 contributor. The current branch is 'master' and the repository name is 'Talk_MAGIC'. A commit message 'Greatly simplify the public domain stuff in the ReadMe' by 'kbroman' is highlighted. Below this is a list of files: 'Figs', 'Perf', 'R', '.g@gnore', 'Makefile', 'ReadMe.md', and 'magic.tex', each with a description and a timestamp. The 'ReadMe.md' file is selected, showing the title 'Talk for MAGIC Workshop in Cambridge, UK' and the content: 'These are slides for a talk I will give at the Workshop on MAGIC-type populations in Cambridge, UK, on 12 June 2013. The PDF is here.' A copyright notice follows, stating that Karl Broman has waived all copyright and related or neighboring rights to 'MAGIC design and other topics'. A 'PUBLIC DOMAIN' logo is at the bottom left. On the right side, there are options for 'Code', 'Issues', 'Pull Requests', 'Wiki', 'Pulse', 'Graphs', 'Network', and 'Settings'. At the bottom right, there are options to 'Clone in Desktop' and 'Download ZIP'.

7. Use version control (git/GitHub)

The screenshot shows the GitHub interface for the repository 'kbroman / Talk_MAGIC'. At the top, it indicates the repository is 'PUBLIC' and shows navigation options: 'Unwatch 1', 'Star 0', and 'Fork 0'. Below this, the current branch is 'master' and the page is titled 'Talk_MAGIC / Commits'. The commits are listed in chronological order, grouped by date. The most recent commit is from September 27, 2013, followed by a commit from June 17, 2013, and a group of commits from June 10, 2013. Each commit entry includes a commit hash, a title, the author's name, the time since the commit, and a 'Browse code' link. The commit from June 17, 2013, is highlighted in yellow and includes a list of changes.
